

every business is
a technology business

an evolving risk

- +18 years providing expertise in the most complex claims
- We insure 40% of the Fortune 500

Every business is a technology business, so every business needs cyber insurance

Technology is advancing at an unprecedented rate with the likes of AI, automation and cloud computing creating endless opportunities. Every business – big or small, physical or digital – now relies on technology at the very least to track operations, manage customer data and run websites.

Whatever your size, whatever your industry, if you use software then you're at risk. Because much like the tech world, cyber threats are just as progressive.

Go beyond simple insurance to cover an attack – know you're doing everything you can to prevent it in the first place. You'll have access to DataSafe's professional support and advice, as well as being insured for the worst.

We'll put together a policy that's perfect for your business.

putting our service into practice

The first thing you can expect is to be brought up to speed on potential risks and how to take control of them. You'll get access to DataSafe training for your staff and advice on your data security – it's support for your Chief Information Security Officer or your IT team.

If you do suffer a breach, we'll be there with DataSafe to help get you back on track. We're both the prevention and the cure.

There are three stages of cyber protection: Ready, Set, Recover

Ready

Equipping you with the tools to face cyber risks

Cyber security moves fast so half the battle is knowing what you're up against.

- The DataSafe portal has the latest information on evolving cyber risks.
- Use our Knowledge Centre to train your teams – with 500 compliance and risk management resources.
- Run a Cyber Fitness Check to assess your organisation's cyber posture.

Set

Support for your Chief Information Security Officer or your IT team

Most breaches are caused by known vulnerabilities or human error. Use staff training and data security experts to manage vulnerabilities and mitigate risks.

- Access Incident Response Planning resources with sample plans and procedures to prepare for a cyber event.
- Train your employees on key privacy and data security issues with online training courses. Keep awareness high with ongoing bulletins, posters and webinars.

Recover

Getting back on track if the worst happens

Attacks can often take time to detect and fix. We'll help you recover ASAP.

- 24/7 Breach reporting hotline: experts on hand 24 hours a day to help you manage the potential consequences of a cyber threat.
- Use our app to report a breach quickly and keep updated.
- Our Claims Team are by your side – they've dealt with thousands of breaches.

whatever the type of company, we can offer an appropriate cyber service

From agile start-ups to multinational corporations, we know that the nature of cyber risk changes depending on the type of business you are. One size does not fit all.

Our knowledge of the cyber risk landscape gives us a deeper understanding of the different types of cyber risk – whether it's the physical damage exposure of big industry or the high volume of patient records stored by a hospital.

That's why we flex our service to deliver across four core segments, to provide the right level and breadth of cover for every type of business.

Our CPR service is for small to medium sized businesses.

Wide variety of industries: Retail/Hospitality, Healthcare, Financial Services, Professional Services.
