

BRIT

How Brit helps clients: Ready, Set, Recover

Brit Cyber Services

Our policies aren't just about cover,
they're about preparing and protecting.

Here's how we support clients before, during and after a cyber incident.

Ready

Understand cyber exposure and strengthen organisational readiness with risk assessments, training and practical planning tools.

Set

Strengthen defences with monitoring, specialist security services and expert guidance to help reduce the likelihood of a cyber incident.

Recover

If an incident occurs, access experienced breach response specialists and claims support to help contain the threat and restore operations.

DataSafe

Available to all Brit primary insureds - DataSafe's tools, training and threat intelligence help manage cyber risk.

- Cyber threat alerts and security news
- Critical vulnerability notifications (CVE alerts)
- Unlimited one-to-one access to Chief Information Security Officer (CISO) expertise
- Policy and procedure templates
- Security awareness training modules
- Phishing email simulations
- Cyber risk webinars and briefings
- AI readiness assessments

Outside-in security scanning

- Attack surface vulnerability reports (powered by Security Vue) - continuous scanning of a client's online systems to identify weaknesses.

BreachBits threat intelligence

Brit uses BreachBits outside-in scanning technology to identify verified attack paths and emerging cyber threats, helping clients prioritise remediation and reduce exposure.

This technology filters out false positives so only viable and verified attack paths that can be exploited are surfaced to the recipient.

Brit will notify clients and brokers of emerging threats so action can be taken.

continued

Up to 30% off cyber security tools

CrowdStrike

Security for the most critical areas of risk; your devices, user accounts, data and cloud systems – it detects and stops breaches.

Tenable

Identify and prioritise cyber risks across your systems and infrastructure in the cloud and on-premise, using robust security, vulnerability management and compliance tools.

KnowBe4

Interactive security awareness training and phishing simulation programmes.

Dragos

Cyber security monitoring and threat detection platform for Operational Technology.

Opswat

The MetaDefender platform checks for threats and removes files that could cause harm before they reach users via multiscanning and deep content disarm and reconstruction (Deep CDR).

Zerofox

'Takedown Service' rapidly removes malicious online infrastructure, including phishing domains, social media impersonation accounts, fraudulent apps and marketplace scams.

Discounted Cyber Security Services

- Threat modelling and threat hunting
- Red-team exercises – comprehensive simulations of cyberattacks to test business response
- Penetration testing (physical, virtual and objective-based)
- Evaluate cyber risk against NIST guidelines
- Managed detection and response (MDR) services
- Quarterly threat landscape reporting
- Purple Team – combined attack and defence team testing and responding to simulated cyberattack
- Exposure reviews for key people

Brit Cyber Claims App

- Available to all Brit Primary insureds through the Apple App Store and the Google Store.
- The app assists you in contacting our 24 hour breach response line and correctly and promptly notifying claims.
- Access to Brit Cyber Knowledge Hub.
